

Collibra Data Catalog

Easily find and understand your data

In today's data-driven world, organizations face the challenge of managing vast amounts of structured and unstructured data stored in isolated silos. This lack of visibility into available data and its suitability for use prevents organizations from using their data as a strategic asset, impacting their ability to innovate and deliver positive business outcomes. Moreover, ensuring secure and compliant data access for a growing number of data consumers, while navigating complex internal policies and external regulations, adds another layer of complexity.

Collibra Data Catalog is the foundation of our platform and empowers Data Citizens to quickly find and understand the data they need, when they need it – regardless of where the data resides. By seamlessly integrating with various sources across multi-cloud, hybrid and on-premises environments, Data Catalog breaks down data silos. AI-driven features like automatic data asset descriptions boost productivity and provide valuable context, enabling organizations to gain a deeper understanding of their data. Additional capabilities including automated data discovery, classification, embedded policy management and granular access controls ensure data is protected and managed appropriately at scale.

Collibra helps our customers do more with trusted data. Our Data Intelligence Platform brings flexible governance, continuous quality and built-in privacy to the world's leading brands. To learn more, visit collibra.com and follow us on [LinkedIn](#), [X](#), [YouTube](#) and [Instagram](#).

Benefits

Empower confident decision-making

Gain comprehensive visibility into your data and its trustworthiness with full business context – including its quality, ratings and what policies are applied to it

Accelerate the delivery of business insights

Allow analysts to spend less time searching for data and reports and more time deriving new insights and sharing their findings to surface business opportunities faster

Drive operational efficiencies

Enable data stewards to streamline the management, curation and governance of data assets, saving valuable time and manual effort

Enhance regulatory and policy compliance

Mitigate risk by simplifying compliance with internal policies and external regulatory requirements at scale

Product highlights

Expansive native connectivity

Gain deep visibility into your data across multi-cloud, on-premises and hybrid environments with 100+ out-of-the-box integrations for commonly-used data sources, BI and ETL tools and applications.

Comprehensive business context

Drive data understanding by easily associating relevant glossary terms, policies, quality metrics, stakeholders and more to data assets.

Automated and AI-enabled curation and enrichment

Boost productivity by accelerating data curation with features such as automatic classification – of both structured and unstructured data – and GenAI-powered asset description generation.

Integrated data marketplace

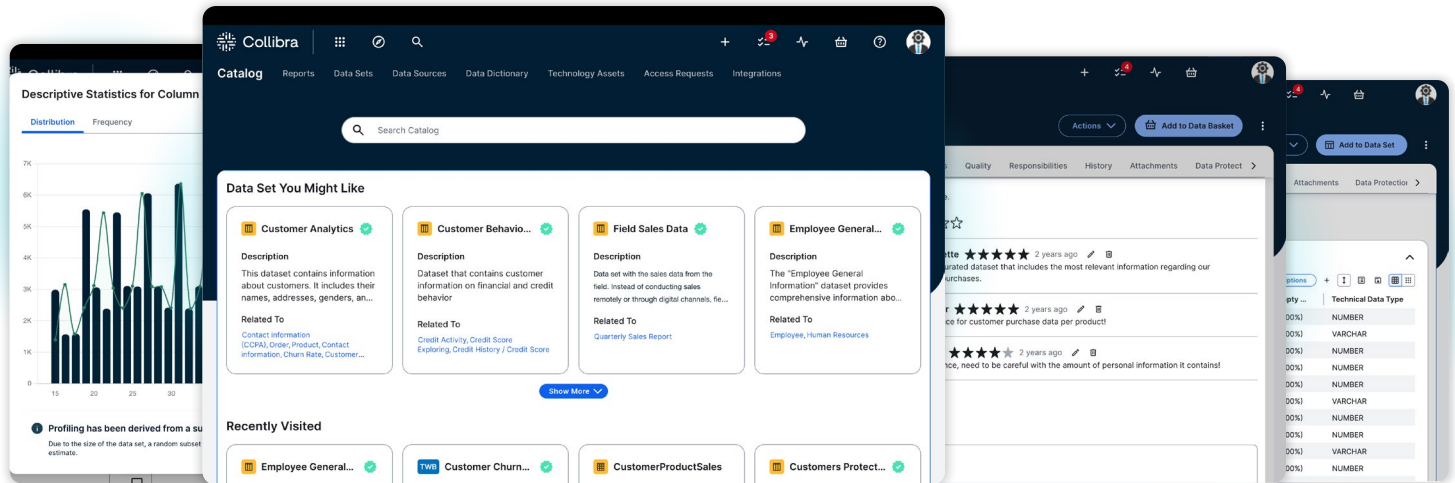

Enable data consumers to quickly find, understand and access curated data via a business user-friendly interface with Collibra Data Marketplace.

Seamless collaboration and workflows

Discuss, rate and certify data assets to share knowledge across your organization, and utilize out-of-the-box or custom workflows to easily manage, automate and collaborate around tasks.

Visibility into data quality

Enhance data understanding and trust through automated data profiling and views of relevant data quality metrics.

Efficiently discover and gain comprehensive visibility into data assets across your organization.
