

Collibra Data Catalog

Accelerate data discovery, understanding and access

Break down silos for seamless access to data that fuels insights

Fragmented governance across data systems creates blind spots that prevent organizations from scaling their data initiatives safely and efficiently. Many enterprises struggle with siloed data and disconnected data catalogs, leaving users unable to find, understand or access the data they need. With AI amplifying both opportunities and risks, this fragmentation increasingly blocks innovation and creates compliance challenges.

Collibra Data Catalog untethers cataloging and governance from specific systems and sources, creating true unified governance across your entire data ecosystem. Our native connectors and enterprise metadata graph enables organizations to discover and enrich data assets with rich business context efficiently, ensuring comprehensive visibility and understanding. Collibra brings technical and business users together through an intuitive marketplace where they can find, understand and safely access trusted data products — accelerating innovation while maintaining control.

Benefits

Create a unified data landscape view

Dismantle silos and create deep visibility via native connectivity and automated discovery across assets.

Simplify access to curated, trusted data

Give data consumers quick access to curated data assets and data products via an integrated, intuitive data marketplace.

Curate and enrich data, efficiently

Make it easy for business and technical users to collaborate on curating and enriching data with business context through advanced automation and workflows.

Solution highlights

Expansive native connectivity

Automatically scan and catalog data across [100+ sources](#) with native connectors, eliminating blind spots across your hybrid ecosystem.

Automated data curation and enrichment

Accelerate curation and enrichment with features like automatic classification of both structured and unstructured data, alongside GenAI-powered asset description generation.

Comprehensive business context

Drive data understanding by easily associating relevant glossary terms, policies, quality metrics, stakeholders and more to data assets.

Integrated, intuitive data marketplace experience

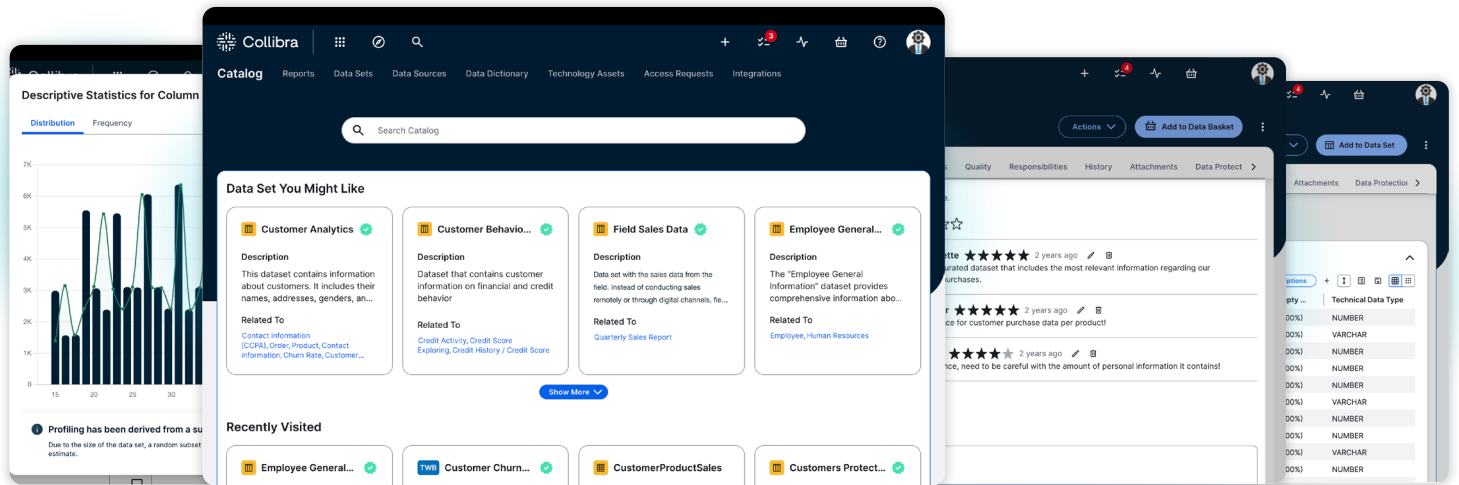

Enable data consumers to quickly discover, understand and request access to trusted data products through Collibra Data Marketplace, providing an intuitive internal data shopping experience.

Visibility into data quality

Enhance data trust through automated data profiling and views of relevant data quality metrics.

Seamless collaboration and workflows

Discuss, rate and certify data assets to share knowledge across your organization, and utilize out-of-the-box or custom workflows to easily manage, automate and collaborate around tasks, including building trusted data products.

Efficiently discover and gain comprehensive visibility into data assets across your organization.
