

Empower everyone with a data marketplace and self-service access

Discover and consume trusted data products

Easily find and add trusted assets to your data basket, and request access to multiple assets in a single step in Collibra Data Marketplace.

Overcoming data access challenges

Organizations recognize the value of data, but many struggle to leverage it effectively because they don't know what data they have and face challenges accessing it. Without a centralized platform, data professionals often waste time searching for information, recreating existing datasets or navigating cumbersome approval processes. This not only slows decision-making but also undermines trust in data reliability and stifles innovation.

According to [IDC](#), 44% of data professionals lack access to the information they need. Additionally, [one-third of executives](#) rank timely data delivery as critical to improving operations. Without streamlined data access, teams remain dependent on specialized data personnel, delaying responses to critical questions and limiting operational agility. The absence of a centralized, governed system for managing data requests at scale also exposes organizations to compliance risks and security vulnerabilities, increasing the likelihood of unauthorized access or fines.

Key features and capabilities

- Integrated data marketplace experience
- Advanced search and filtering
- Rich business context views
- Community-driven ratings and reviews
- Interactive data notebooks
- Embedded data access controls

Removing barriers with an internal data marketplace

In today's fast-paced landscape, organizations need more than just data — they need the ability to find it easily, understand it clearly, access it quickly and use it confidently. When teams can seamlessly tap into trusted data, they unlock better insights, faster decision-making and greater innovation.

A well-curated internal [data marketplace](#) makes this possible by serving as a centralized hub for data discovery and access, connecting data producers and consumers. It enables organizations to break down barriers, allowing all users to find the information they need without delays or reliance on specialized teams.

More than just a tool for access, a data marketplace fosters collaboration and data sharing. By making trusted [data products](#) readily available, organizations empower their teams to align around data-driven insights, build on each other's work and innovate with confidence.

Governed data marketplaces strike the right balance between democratized data access and control. They ensure that data remains both a valuable asset and a safeguarded resource, enabling organizations to navigate the complexities of today's data landscape with ease.

A unified approach to data discovery, access and collaboration

Easily discover and understand curated data

Collibra empowers users to effortlessly discover trusted data products through a configurable, user-friendly data marketplace. With rich business context and advanced search capabilities, teams can quickly locate relevant data and understand its purpose and usage. Governance features, such as an integrated business glossary and certifications, help ensure data is accurate, consistent and well-understood across the organization.

Efficiently access and safely consume data

Collibra removes friction from accessing data by automating permissions with customizable workflows and embedded policy management and enforcement. An intuitive data shopping experience allows users to request access quickly, supported by data contracts and sharing agreements to maintain compliance. Automated access controls protect sensitive information, helping to ensure the right users can access the right data when they need it.

Effortlessly collaborate around data products

Collibra fosters collaboration by enabling teams to manage and share reusable data products seamlessly. Interactive features such as ratings, reviews and comments encourage feedback and engagement. Collaborative workflows and interactive data notebooks enhance cross-functional data management, allowing teams to align on insights and optimize their work. By supporting dynamic engagement, Collibra transforms data into a shared asset that drives innovation and growth.

Empower confident data-driven decisions

Collibra empowers organizations to realize the full potential of their data by simplifying discovery access, and collaboration through a governed and intuitive data marketplace experience. By ensuring that trusted data products are readily available and accessible to the right users, Collibra helps accelerate decision-making and foster innovation while maintaining compliance. With Collibra, organizations can confidently navigate the complexities of the data-driven landscape and turn data into a powerful asset for growth.
