

Custom training

Fast, scalable enablement built by experts, designed for you

Bring data intelligence to life in your organization with customized learning experiences designed to meet your goals. Our team of expert trainers, instructional designers and education media specialists will help you determine the most effective training solutions based on roles, use cases and desired results.

Whether you want one custom training element or to work together on a comprehensive enablement plan, we will help ensure that your training focuses on performance outcomes and prioritizes impactful experiences.

Why custom training?

Meet learners where they are

Connect with individual needs and your organizational culture, providing training that resonates and sticks

Focus on the right goals

Develop training that builds and reinforces the behaviors that matter most to your organization

Showcase your environment

Make learning real by showing learners how they will actually use - and benefit from - the Collibra environment in their day-to-day activities

Let our experience work for you

Our education team has delivered training to thousands of users, and all our training follows best practices based on that experience

What can you use custom training for?

With custom training, you can choose from videos or instructor-led training to focus on areas where your team needs initial learning or more advanced reinforcement.

Some popular topics include:

Videos

- Introduction to Collibra, navigation and searching, asset exploration and workflows (Check out this example of a [workflow custom training video](#))

Live instructor-led sessions

- Data Stewards and Data Owner workshops

How custom training works

Working side by side with your team, we will design training to meet both organizational and individual learner needs, by providing contextual learning focused on specific use cases of teams or roles. We'll provide step-by-step guidance using real-life scenarios or exercises to make sure your learners gain comfort and confidence in using Collibra effectively and efficiently.

We offer **three types of custom training** that can be set in your environment or our training sandbox.

Instructor-led demo video

Custom content includes the demonstration script and professionally edited video. We will meet with you to plan the demonstration and conduct a dry run.

Cost: 1 video (up to 5 minutes) = 12 EDU Credits

Instructor-led training course without exercises

Custom content includes the course outline, course presentation and demonstrations. We will meet with you to scope the course, review course content, conduct a dry-run and conduct the training.

Cost

- Content development = 7 EDU Credits per hour of course duration
- Course Delivery = 1 EDU Credit per hour of course duration per session delivered

Instructor-led training course with exercises

Custom content includes the course outline, course presentation, demonstrations and exercises. We will meet with you to scope the course, review course content, conduct a dry-run and conduct the training.

Cost

- Content development = 11 EDU Credits per hour of course duration
- Course Delivery = 1 EDU Credit per hour of course duration per session delivered

How to get started with custom training

Whether you want a single custom learning asset or a larger enablement program, Collibra's custom training will get you on the right track with fast, scalable enablement designed for your team.

To discuss your potential project, simply **book a scoping call** (if you have Education credits) or email training@collibra.com today to learn how we can help you.
