

Collibra for state and local governments

Ensure accessible, high-quality data and AI for better decision making and modernized community engagement

State and local governments, including legislative bodies, state CIO offices, transportation authorities and metropolitan planning organizations, operate in increasingly fragmented and complex landscapes. Disparate, legacy data sources coupled with diverse sets of needs and requirements lead to state and local government workers unable to easily find, understand or gain confidence in the data they seek. Even worse, citizens in communities across the country are left with poor public services, increasingly dysfunctional infrastructure and digital experiences that don't live up to their evolving expectations.

Undeterred by these challenges, forward-thinking state and local governments are taking innovative steps to unify data and AI governance, providing employees with trusted, high-quality data and AI that serves the needs of citizens and communities, no matter their size. This requires the implementation of a rigorous governance and management strategy that accounts for all data assets created, collected, controlled by each entity while ensuring compliance with not only state level laws and regulations, but federal as well.

Unified governance for data and AI

Collibra enables state and local governments with complex data challenges, hybrid data ecosystems, and big ambitions for data and AI, to accelerate data and AI use cases while ensuring data accessibility, adoption and security. Combating fragmented governance and visibility across their data ecosystem, state and local data leaders utilize Collibra to unify governance for data and AI for every system, source and user. Unlike other solutions, Collibra offers the only complete, FedRAMP certified platform to provide automated visibility, context, and control and enriches data context with every use. For the first time, state and local governments can accelerate every data and AI use case safely, confidently and with well-understood data.

Collibra Data Intelligence Platform, a FedRAMP certified solution, accelerates data and AI for state and local government departments and agencies faced with complex data challenges. Collibra unifies governance for data and AI across on-premises, hybrid and multi-cloud environments, engages every user and group, and creates the safety and autonomy needed for scaling data and AI across every use case.

The Office of the Secretary of Defense relies on Collibra to help find, understand and trust their data, ultimately empowering and enabling better decision-making for more than 100k+ users across the department.

Collibra helps enable data accessibility, adoption and security while quickly scaling cross-functional data and AI solutions

Enhance public services

- Proactive citizen engagement
- Service delivery optimization
- Citizen feedback analysis

Optimize operational efficiency

- Infrastructure management
- Resource allocation optimization
- Process automation

Drive innovation and digital transformation

- “Smart” initiatives
- AI-driven analytics
- Digital services expansion

Promote transparency and accountability

- Open data initiatives
- Streamline financial management and reporting
- Public accountability

Deliver trusted AI and enhance privacy

- Identity management
- Regulatory compliance for data and AI
- Access control policy management

Collibra Data Intelligence Platform: A complete platform that provides automated visibility, context and control

Data Governance

Increase transparency into the data landscape to maximize usage while minimizing risk

Data Lineage

Visualize how data flows, transforms and is used across the data landscape

AI Governance

Catalog, assess and monitor any AI use case to deliver trusted and valuable AI

Data Notebook

Query and collaborate around data for enhanced understanding

Data Catalog

Deliver insights faster with automated discovery and curation

Data Privacy

Automate the enforcement of data privacy while assessing regulatory risks

Data Quality & Observability

Resolve data quality issues before they impact the business with automated monitoring, validation and notification

Protect

Define data access policies and automate enforcement to protect sensitive data

Ensure data accessibility, adoption, and security today - collibra.com/publicsector
