

# Scale AI with confidence

Ensure reliability, traceability and compliance at every step

Overview of an AI use case with built-in progress tracker

## Overcoming challenges

There is a widening gap between what companies want to do with data and AI and what they can do. Organizations face mounting challenges in ensuring compliance, trust and value delivery. Fragmented data silos, unclear governance structures and evolving regulations like the EU AI ACT hinder success.

Fragmented governance isn't simply a technical obstacle. It stifles the capacity to scale data and AI initiatives, negatively impacting the rate of innovation at an organization. With estimates of AI adding approximately 20 trillion dollars to the global economy by 2030, it is more important now than ever before to deliver reliable, traceable and compliant AI for every use case. This allows organizations to accelerate their data and AI use cases — without the risk.

## Key product features and capabilities

- Configurable AI lifecycle management
- Unified data and AI lineage
- Universal AI oversight through integrations
- Automated policy control and validation
- Out of the box assessment including EU AI Act and other

### Confidently accelerate your AI use cases

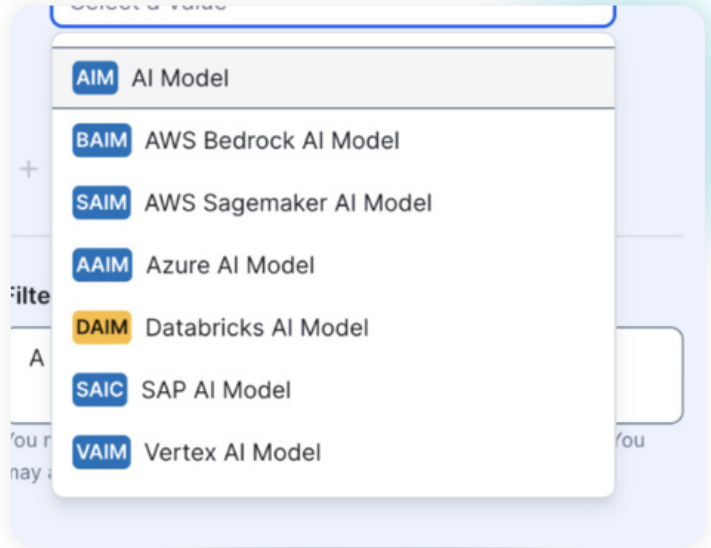

With collaborative lifecycle management, automated policy control and built-in risk assessment, Collibra empowers every organization to scale AI with confidence. Collibra helps keep AI initiatives afloat by increasing AI reliability so stakeholders can avoid common pitfalls such as inconsistent data, biases, fragmented monitoring, lack of accountability and business misalignment.

Collibra also helps ensure AI transparency and accountability through our built-in AI model documentation, end-to-end lineage tracking and trusted data sources. These features give leaders confidence in their AI initiative, saving organizations time, money and credibility.

Additionally, with rising global AI regulations, organizations need to focus on AI compliance to avoid lofty fines, halted projects and reputational harm. Collibra dynamically systematizes AI compliance, extending accountability beyond privacy experts to engage all stakeholders by combining internal policy checks with global standards.

### That's Data Confidence™

Only Collibra empowers you to scale AI with confidence, leveraging reliable data and ensuring compliance readiness across the AI lifecycle, all within a secure, tech-agnostic and frictionless environment.

Govern any AI use case regardless of model origin (universal AI oversight through integrations)
