## Collibra + SAP Datasphere

# Deliver trusted data and AI

To help organizations simplify their data strategy, SAP and Collibra offer a unified architecture to manage, integrate and govern data across disparate sources, ensuring your organization operates with trusted data and powers trustworthy AI solutions. Collibra and SAP Datasphere have joined forces to help organization leverage their proprietary data so they can do more with the data they have. Our integrated approach provides a comprehensive platform that seamlessly integrates and governs data, empowering organizations with the trusted data required to drive innovation and maintain a competitive edge.

**48%**
**CxOs that believe their organizations lack enough high-quality data to operationalize their generative AI initiatives.**

## Collibra and SAP: A data-driven partnership

**Establish a high-quality data foundation.** Centralize and standardize data across the organization, enhancing data quality and consistency. Automate data checks and validations to ensure accurate, consistent and reliable business outcomes.

**Streamline governance of your business data.** Implement data governance across your entire data landscape, including SAP and other data sources. Establish a consistent framework for data management, including compliance and reducing legal risks.

**Deliver trusted AI.** Deliver access to high-quality, well-governed data, ensuring trustworthy and transparent AI products. Enhance AI's value with unified governance of AI models and data assets across SAP and other AI platforms.

## SAP: The backbone of a data-driven business

SAP applications are the backbone of your data ecosystem, providing the core business data needed to develop your analytics, data products and AI models. SAP Datasphere enables organizations to connect and deliver data across various systems with business context and integrity intact. This simplifies an organizations complex data landscapes, providing data consumers with easy access to accurate, meaningful information.

## Collibra: For trusted data and AI

An SAP® Endorsed app available in the SAP Store, Collibra Data Intelligence Platform delivers end-to-end data governance, data quality and observability, and AI governance. We deliver trusted data discovery, collaboration and compliance for technical and business users—regardless of the data source—while improving data quality with automated checks across systems like SAP and many more. Our unified approach to data and AI governance simplifies initiatives, ensuring data integrity, compliance and transparency that fuels smarter, faster innovation.
